Thank you for your inquiry. I am glad you are interested in raspberries. The Cumberland Blackcap Raspberry is the hardiest, heaviest yielding, best selling, and largest raspberry grown. I have but one kind -- the best. The Cumberland Blackcap. You can get no mixed kinds when you buy from me, for I have only one kind. The Cumberland Blackcap Raspberry, year in and year out for ten years straight, will make you twice to ten times as much money as any of the other varieties, and the Cumberland Blackcap Raspberry actually does produce \$500.00 an acre, and more, oftentimes.

I now have a large patch and expect to put out seven acres more next spring, which shows you I am practicing what I preach. My ground is already plowed and harrowed down smooth for early quick work as soon as the spring thaw comes in February or the first of March.

Raspberries begin to grow earlier than any other plant and should be put out in February or the first half of March - usually. Thus a good stand and a big growth the first year is assured.

My plants are selling fast and will all be gone in a few weeks, as this plant is the first one ordered by those who understand them. Order now, so as to be sure to get the first shipments and the best growth and thickest stand as early planting means easier for the plant to grow. My plants are all healthy and state inspected. As to my reliability, I refer you to the Bank of Rulo, Rulo, Nebraska.

Bargain prices for good, healthy plants. Cash with order.

100	Cumberland Blackcap Raspberry Plants	\$ 3.00
500	" " " "	12.00
1000	" " " "	20.00
5000	" " " "	85.00
10,000	" " " "	150.00

I ship no less than 100 plants. All plants carefully packed, dug fresh the same day shipped, F. O. B. Rulo, Nebraska. Thus you get fresh plants.

Plant one plant every $3\frac{1}{2}$ feet in rows $7\frac{1}{2}$ feet apart. 3000 will plant an acre. Plants set later than March 15th usually do not start so well, and one plant should be put out every two feet to insure a stand. So plant early and save 2000 plants to the acre over the late planter. Order early for I may be out of plants and I do not wish to disappoint. Early plants grow faster and larger than late plants and produce $\frac{1}{2}$ better the next year. Everything is in favor of the early planter.

Looking for your order at once, I am

Yours respectfully,

MPC:JW

James Wiltse.

Thank you for your inquiry. Glad you are interested in Strawberries. One plant often produces a quart of berries a season. Strawberries are the quickest and biggest money-making crop grown. They do produce \$500 to \$1500.00 to a single acre in a single season, when in skillful hands.

I offer no new varieties of unknown value. Only five. These are the Best Known Grown - all perfect Polanizers. Best Healthy Plants. I have never realized less than \$350.00 from a single acre. Four acres in 1923 made me more money than 60 acres of corn, 18 acres of alfalfa, 20 acres of pasture, 5 milk cows, and a hundred head of hogs. I have five acres for cropping this year and expect to put out eight acres more this year for 1925 crop.

70 pickers graced my patch last year and 98 crates were shipped in a single day, so you can see I know there is money to be made from Strawberries.

I have only a limited number of plants to sell so order soon, as they will all be sold in a few weeks. Plants are shipped in turn as the orders come in. First come, first served. First served, first planted, and hence the biggest stand and largest crop follows the early orders. The earlier the strawberries are set the easier they grow and the result is a better stand and one-half more to twice as large a yield comes to the early planter as to the late planter. Order early and get the EARLY shipments. I want you to get the best results so order early -- now is the time, while you think of it.

Bargain Prices for Good Strawberries. Any Varieties. True to name. F.O.B. Rulo, Nebraska. No less than 100 of any variety shipped.

Charles I, Senator Dunlap, Dr. Burrill, Aroma, Gibson.

100 plants	\$1.00	Cash with order.	400 plants	\$2.90	Cash with order.
200 plants	1.80	" " "	500 plants	3.50	" " "
300 plants	2.40	" " "	1000 plants	6.00 per 1000	Cash.

If you want plants by Parcel Post, add 20¢ 100 plants to any address.

These plants are much better than most plants offered and are not to be compared to the cheap mixed plants sold and named to suit demand.

If planted early, one plant every $3\frac{1}{2}$ feet apart in the row, with the rows $3\frac{1}{2}$ feet apart, using about 4000 plants to the acre, is sufficient under good conditions. If planted late, 8000 to 10,000 plants are required to get the same result as half that number produces when planted early. So order early. If you wait too long, I may be out of plants.

Yours respectfully,
